## INTERSTATE SHIPMENTS OF CALIFORNIA DECIDUOUS TREE FRUITS

1963 SEASON

CONTENTS

- Foreword	iii
- Special notice	iv

<u>Movement</u>		<u>Page</u>
Table		
1	Rail and truck passings and boat shipments, 1952-63	1
2	Rail passings, weekly, 1963	2
3	Rail passings by commodities and counties, 1959-63	4
4	Rail passings by counties and loading stations, 1963	7

Apples

5	Domestic rail and truck shipments and imports by origin, 1950-63.	13
6	Domestic rail and truck shipments and imports by origin, monthly, 1963.	14
7	Distribution of truck passings by destination, 1962 and 1963	14
8	Truck unloads at 41 United States and 5 Canadian cities, 1958-63.	15
9	Semi-monthly cold storage holdings in California, 1953-63	16
10	Semi-monthly cold storage holdings in the Watsonville District, 1953-63	17
11	California commercial production and utilization, 1939-63	18

Apricots

12	Domestic rail and truck shipments and imports by origin, 1950-63.	19
13	Domestic rail and truck shipments and imports by origin, monthly, 1963.	19
14	Rail and truck unloads at 41 United States and 5 Canadian cities by origin, 1963	20
15	Distribution of interstate truck passings by destination, 1962 and 1963	21
16	Season weighted average auction prices by varieties and containers, 1961-63	21
17	California commercial production and utilization, 1939-63	22

Cherries

18	Domestic rail and truck shipments and imports by origin, 1950-63.	23
19	Domestic rail and truck shipments and imports by origin, monthly, 1963.	24
20	Interstate rail passings by loading stations, daily, 1963	24
21	Distribution of interstate rail passings by destination, 1962 and 1963	25
22	Distribution of interstate truck passings by destination, 1962 and 1963	25
23	Rail and truck unloads at 41 United States cities and 5 Canadian cities by origin	26
24	Season weighted average auction prices by varieties and containers, 1961-63	27
25	California commercial production and utilization, 1939-63	28

Mixed Deciduous

26	Rail and truck shipments by origin, 1950-63	29
27	Rail and truck shipments by origin, monthly, 1963	29
28	Rail unloads at 41 United States cities and 5 Canadian cities by origin, 1963	30

Nectarines

29	Domestic rail and truck shipments and imports by origin, 1963, and season totals 1958-62.	31
30	Distribution of interstate truck passings by destination, 1962 and 1963	31
31	Rail and truck unloads at 41 United States and 5 Canadian cities by origin, 1963	32
32	Season weighted average auction prices by varieties and containers, 1961-63	33
33	California commercial production and utilization, 1954-63	35

F O R E W O R D

Interstate rail shipments of 1963 crop deciduous tree fruits through March 15, 1964, were 9,515 cars. This will probably be very close to the final total since only an occasional car of storage pears remained to be shipped. The season total is 1,323 less than the 10,838 cars shipped from the 1962 crop and is the smallest in the 36 years for which records are available. Pear shipments were less than a fourth as heavy as in the previous season as the result of a combination of a very short crop and relatively high canner prices. Peach shipments were somewhat lighter while nectarines increased substantially to reach a new record high. Other commodities showed only minor changes. Rail shipments include trailer vans loaded on flat cars.

Truck movement to out-of-state points was the equivalent of 5,441 cars, well below the record of 5,930 in 1962. Trucks accounted for slightly over 36 percent of the combined rail and truck total compared with 35 percent in 1962 and 31 percent in 1961. Because of the trend toward heavier loading in rail cars, however, the percentage of the total tonnage which moved by rail probably did not decrease and may have been slightly greater than in 1962. No data are available regarding the small volume which moved by air but it is believed that with the exception of figs, air shipments were limited largely to light shipments at the beginning of the harvesting period.

Interstate rail shipments of apples were only 5 cars, 17 less than in 1962. The Gravenstein, once an important shipping variety, has been losing favor in the fresh market for many years and has been gaining as a canning variety, especially for applesauce. The crop in 1963 was small and most of the volume that was marketed fresh went to California and other nearby markets by truck. Most Newtowns, which were a relatively good crop, went to processors and to nearby fresh markets.

Apricot shipments of 202 cars were 5 more than in 1962. Interstate truck movement of 75 cars, however, was 19 less than in the previous season. Quality, color, and size were good. Cool weather retarded maturity to some extent and helped to spread the season. There was very little sunburning or pitburning. The crop was above average in volume as favorable weather during the blossoming season resulted in a good set of fruit. Demand from canners was good and about 65 percent of the total production went to this outlet. About 25 percent of the crop was dried, considerably more than in the previous two years. About 6 percent of the crop was marketed fresh and about 4 percent frozen. Prices for both processing and fresh market stock were somewhat lower than for the lighter crop in 1962.

The cherry crop was light as a result of unfavorable weather during the blossoming period. The fruit sized well and was generally of good to excellent quality in both the Stockton-Lodi district and the Santa Clara Valley. As a result, a larger part of the crop was marketed fresh than in the previous year. Interstate rail shipments of 430 cars were very slightly less than the 441 a year earlier while interstate truck movement of 128 carlot equivalents equalled the record reached in 1962. Prices in eastern markets averaged a little lower than in 1962 and were about the same in local markets. Processing prices for both canning and brining stock were higher than in 1962.

Nectarine volume continued to increase as additional new acreage came into bearing and movement again reached a new record high. Considerable culling was required in some of the early varieties because of split pits but quality improved as the season advanced and the midseason to late season varieties were mostly of good to excellent quality and of good size. The total of 1,974 cars by rail easily exceeded the previous record of 1,851 in 1961 and was almost 375 more than in 1962. Truck movement to out-of-state points was the equivalent of 940 cars, 34 more than the previous record in 1962. Prices averaged somewhat lower than in 1962. Almost all of the crop was marketed fresh.

Interstate rail shipments of peaches declined to 1,697 cars, almost 250 less than in 1962 and the smallest total since 1941. A large crop in the southern states greatly restricted demand for California peaches in the eastern and some of the midwestern markets, to which most shipments are made by rail. In the more western markets, demand held up well and interstate movement was heavy. Interstate truck movement equivalent to 2,501 cars, while down 197 from that of 1962, was greater than in any other previous season. Volume of both the regular and Early Alberta types was lighter as these varieties have continued to lose ground in favor of some of the newer and more highly colored early and midseason varieties. Canners took a record tonnage, amounting to slightly more than 40 percent of the entire freestone production, and freezers took almost 10 percent. More than 12 percent was dried. Prices paid by canners, freezers and driers were somewhat higher than in 1962 while fresh market prices averaged very slightly higher. As usual, almost all of the clingstone crop was canned; only about 3 percent was marketed fresh. Canning prices for clingstones were somewhat lower than in 1962.

A combination of the smallest pear crop in many years and a strong canner demand at high prices resulted in by far the smallest movement to out-of-state fresh markets in the 36 years for which interstate figures have been available. The 601 cars of Bartletts were only a little more than a fifth as many as in 1962. Of the other varieties, Comice movement of 88 cars was 10 more than in 1962 but there were only 12 cars of Bosc compared with 71 in 1962. Only 2 cars of Winter Nelis had been shipped to March 15. Interstate truck movement of all varieties, but chiefly Bartletts, was also down sharply from 1962. Canners took nearly 84 percent of the entire Bartlett crop compared with about 75 percent in most recent years when production was heavier. Fresh market prices for Bartletts were the highest on record while canning prices were the highest with the exception of 1948. Fresh market prices of other varieties averaged about the same as in 1962 while the average price for canning was the highest on record.

F O R E W O R D - Continued

Interstate rail shipments of plums totaled 4,202 cars, the largest number of cars since 1956 while truck movement to out-of-state markets reached a record total of 1,293 carlot equivalents. The fruit ran heavy to large sizes, especially the early and midseason varieties, and the crop turned out well above earlier expectations, exceeding that of any previous season. Production of several of the relatively new varieties, particularly the Laroda and Nubiana, was becoming fairly substantial as more acreage came into maturity. Most varieties brought slightly lower returns to growers than in 1962 and auction prices in the eastern and midwestern markets averaged the lowest since 1959.

Among the minor fruits, the 29 cars of figs were 19 less than in 1962 and were the lightest in the 36 years for which records are available. The increasing use of air transportation for this commodity in the last few years has cut into the volume moving by rail. Persimmons increased very slightly to 69 cars from the 67 of the previous year. Pomegranates were also up very slightly with 127 cars compared with 124 in 1962.

Large quantities of the various fruits went to fresh markets within California in addition to the interstate rail and truck movement. During the calendar year 1963 the combined volume of California deciduous tree fruits received at Los Angeles, San Francisco, and Oakland was the equivalent of 7,467 cars, or just about half as much as moved to out-of-state markets. No data are available regarding the quantities marketed in other California cities or sold at roadside.

S P E C I A L   N O T I C E

Because of certain changes in the information available on interstate rail passings, several changes in tabulations of passings reports were made effective with the beginning of the 1958 season.

Cars of mixed deciduous fruits in which one fruit comprised more than 50 percent of the load were considered as straight cars of that commodity instead of being shown as "Mostly Peaches" or "Mostly Plums" as in previous seasons. Cars containing three or more fruits in which no one fruit comprised as much as 50 percent of the load were considered as "Mixed Deciduous".

These changes do not in any way affect the basis on which carlot shipments (as opposed to passings) are reported. Carlot shipments, which appear in several tables in this summary, are reported as a single commodity if they are straight cars or if they contain 90 percent or more by weight of a single commodity. Cars containing two or more fruits are reported in the shipment table as Mixed Deciduous if no one commodity comprises as much as 90 percent of the load by weight.

The practical effect of these changes is that the passings of most fruits, especially those frequently shipped in mixed cars such as peaches, plums, and nectarines, exceed the shipments reported. On the other hand, passings of Mixed Deciduous are less than the shipments reported.

In Table 1, cars previously shown in seasons from 1952 through 1958 as "Mostly" cars have been combined with straight cars to put them on the same basis as passings in the seasons from 1958 through 1963. Interstate truck movement and boat shipments have been made a part of this table in order to provide as nearly as possible a complete tabulation of all interstate movement.

1/ Through March 15, 1964.

2/ For the seasons 1952 through 1957, "mostly" cars of mixed deciduous combined with straight cars. Starting with the 1958 season, cars containing three or more fruits in which no one fruit comprised more than 50 percent of the load were classified as mixed deciduous.

3/ Calendar year basis. Includes some Northwestern fruit transshipped from California points. Pears include canner stock in some years.

Source: Copies of train manifests and consists furnished by the Pacific Fruit Express Company, the Santa Fe Refrigerator Department, and the REA Express. Truck data furnished by Bureau of Plant Quarantine, California Department of Agriculture. Boat movement obtained from the steamship lines operating out of San Francisco, California.

1/ Prior to 1949 reported as frozen only.

2/ Mostly fruit crushed for cider, vinegar, and juice.

3/ For these years some fruit produced was not harvested because of economic conditions and/or harvested but not utilized because of abnormal culage.

1/ Freestone: includes quantities used for pulp, baby food, jam, juice, and nectar.

Clingstone: also includes quantities for fruit cocktail, other mixed fruits, pickles, and preserves.

2/ Produced, but not marketed because of economic conditions, excessive cullage, or cannery diversion.

3/ Freestone: includes 2,000 tons crushed in 1943 and 400 in 1944.

Clingstone: includes 3,000 tons crushed in 1943, 3,500 in 1944 and 1,300 in 1945.
